1. Write an SQL query to fetch the FIRST_NAME from the Worker table using the alias name as WORKER_NAME.

Ans.SELECT first_name AS WORKER_NAME FROM Worker;

worker (12r × 1c)

#	1 WORKER_NAME
1	Arun
2	Alan
3	Krishna
4	Jacob
5	Aarav
6	Neema
7	Ram
8	Nishaan
9	Ishaan
10	Amal
11	Jyothi
12	Taaniya

2. Write an SQL query to fetch unique values of the DEPARTMENT from the Worker table.

Ans. SELECT DISTINCT department FROM Worker;

worker (5r × 1c)

#	1 department
1	Admin
2	HR
3	Technical
4	Operation
5	Technical Support

3. Write an SQL query to fetch the FIRST_NAME from the Worker table in uppercase.

Ans. SELECT UPPER(first_name) FROM Worker;

Worker (12r × 1c)

#	1 UPPER(first_name)
1	ARUN
2	ALAN
3	KRISHNA
4	JACOB
5	AARAV
6	NEEMA
7	RAM
8	NISHAAN
9	ISHAAN
10	AMAL
11	JYOTHI
12	TAANIYA

4. Write an SQL query to display the second highest salary from the Worker table.

Ans. SELECT DISTINCT salary AS SECOND_HIGHEST_SALARY

FROM Worker

ORDER BY salary DESC

LIMIT 1 OFFSET 1;

worker (1r × 1c)

#	1 SECOND_HIGHEST_SALARY
1	500,000

5. Write an SQL query to display the top n (for example, 10) records from the Worker table.

Ans. SELECT * FROM Worker ORDER BY Worker_id DESC LIMIT 10;

worker (10r × 6c)

#	1 worker_id	2 first_name	3 last_name	4 salary	5 joining_date	6 department
1	W012	Taaniya	Batt	42,000	2025-01-01	Technical Support
2	W011	Jyothi	Singh	58,000	2019-04-01	Technical Support
3	W010	Amal	Lal	120,000	2015-12-01	Operation
4	W009	Ishaan	Kumar	40,000	2021-05-01	Operation
5	W008	Nishaan	Sankar	300,000	2019-01-01	Technical
6	W007	Ram	Kumar	600,000	2012-12-01	Technical
7	W006	Neema	Menon	500,000	2017-12-01	Technical
8	W005	Aarav	Shyam	60,000	2024-02-01	Technical
9	W004	Jacob	Mathew	80,000	2018-09-01	HR
10	W003	Krishna	Das	20,000	2024-02-01	HR

6. Write an SQL query to display the current date and time.

Ans. `SELECT NOW();`

Result #1 (1r × 1c)

#	1 NOW()
1	2025-07-01 13:22:44

7. Write an SQL query to fetch the count of employees working in the department 'Admin'.

Ans.
```
SELECT COUNT(*) FROM Worker
WHERE department = 'Admin';
```

Worker (1r × 1c)

#	1 COUNT(*)
1	2

8. Write an SQL query to display the details of the workers whose salary lies between 100000 and 500000.

Ans. SELECT * FROM Worker

WHERE salary BETWEEN 100000 AND 500000;

worker (4r × 6c)

#	1 worker_id	2 first_name	3 last_name	4 salary	5 joining_date	6 department
1	W001	Arun	Kumar	100,000	2016-02-01	Admin
2	W006	Neema	Menon	500,000	2017-12-01	Technical
3	W008	Nishaan	Sankar	300,000	2019-01-01	Technical
4	W010	Amal	Lal	120,000	2015-12-01	Operation

Or excluding 100000 and 500000

SELECT * FROM Worker

WHERE salary > 100000 AND salary < 500000;

worker (2r × 6c)

#	1 worker_id	2 first_name	3 last_name	4 salary	5 joining_date	6 department
1	W008	Nishaan	Sankar	300,000	2019-01-01	Technical
2	W010	Amal	Lal	120,000	2015-12-01	Operation

9. Write an SQL query to display all worker details from the Worker table, ordered by FIRST_NAME in ascending order.

Ans. SELECT * FROM Worker

ORDER BY first_name ASC;

worker (12r × 6c)

#	1 worker_id	2 first_name	3 last_name	4 salary	5 joining_date	6 department
1	W005	Aarav	Shyam	60,000	2024-02-01	Technical
2	W002	Alan	James	50,000	2022-06-01	Admin
3	W010	Amal	Lal	120,000	2015-12-01	Operation
4	W001	Arun	Kumar	100,000	2016-02-01	Admin
5	W009	Ishaan	Kumar	40,000	2021-05-01	Operation
6	W004	Jacob	Mathew	80,000	2018-09-01	HR
7	W011	Jyothi	Singh	58,000	2019-04-01	Technical Support
8	W003	Krishna	Das	20,000	2024-02-01	HR
9	W006	Neema	Menon	500,000	2017-12-01	Technical
10	W008	Nishaan	Sankar	300,000	2019-01-01	Technical
11	W007	Ram	Kumar	600,000	2012-12-01	Technical
12	W012	Taaniya	Batt	42,000	2025-01-01	Technical Support

10. Write an SQL query to fetch the following details: worker_name, department, bonus_amount (Use appropriate joins if necessary).

Ans. SELECT

```
  CONCAT(w.first_name, ' ', w.last_name) AS worker_name,
  w.department,
  b.bonus_amount
FROM Worker w
LEFT JOIN Bonus b
ON w.worker_id = b.worker_id;
```

worker (12r × 3c)

#	1 worker_name	2 department	3 bonus_amount
1	Arun Kumar	Admin	20,000
2	Alan James	Admin	(NULL)
3	Krishna Das	HR	10,000
4	Jacob Mathew	HR	(NULL)
5	Aarav Shyam	Technical	45,000
6	Neema Menon	Technical	(NULL)
7	Ram Kumar	Technical	15,000
8	Nishaan Sankar	Technical	20,000
9	Ishaan Kumar	Operation	(NULL)
10	Amal Lal	Operation	(NULL)
11	Jyothi Singh	Technical Support	50,000
12	Taaniya Batt	Technical Support	(NULL)

11. Write an SQL query to fetch departments along with the total salary paid to employees in each department.

Ans. SELECT department ,sum(salary) AS total_salary FROM worker GROUP BY department DESC

worker (5r × 2c)

#	1 department	2 total_salary
1	Technical Support	100,000
2	Technical	1,460,000
3	Operation	160,000
4	HR	100,000
5	Admin	150,000

12. Write an SQL query to fetch the names of workers who earn the highest salary.

Ans. SELECT CONCAT(first_name, ' ', last_name) AS worker_name, max(salary) FROM worker

worker (1r × 2c)

#	1 worker_name	2 max(salary)
1	Arun Kumar	600,000
